EDUCATION

University of Arizona

Tucson, AZ

College of Science, W.A. Franke Honors College

Bachelor of Science with Honors in Computer Science and Mathematics

September 2021 – August 2025

GPA: 3.48

EXPERIENCE

Rare Books Work Experience

August 2025

Blackwell's Rare Books

Oxford, United Kingdom

- Conducted research on the historical context of century-old letters through archival investigation and interviews with local authorities.
- Translated historical correspondence from French to English to support ongoing cataloguing and research efforts.
- Assisted with archival organization and developed familiarity with cataloguing practices, presentation standards, and rare-book handling workflows.

Technical Research Project – Honors Thesis

January 2025 – August 2025

University of Arizona

- Conducted independent research on virtual memory, process isolation, and trusted execution boundaries for an honors thesis in computer science.
- Designed, implemented, and documented a C prototype exploring an alternative architecture for shared library execution.
- Synthesized system design considerations, implementation results, and open research questions into a long-form thesis report.
- Managed a self-directed research project from proposal through final submission, incorporating writing, debugging, documentation, project organization, and advisor feedback.

Research Intern

June 2025

Humaic

Bay Area, CA

- Conducted research on foundational theoretical questions of computation through a metamathematical lens.
- Synthesized literature across computability theory, proof theory, and mathematical logic to identify open research directions.

Stanford LINXS Computer Science Summer Research Internship

June 2024 – August 2024

Stanford University

Stanford, CA

- Collaborated with Professor Sara Achour and graduate researchers to prototype an online branch predictor using hyperdimensional computing.
- Contributed to research discussions, technical planning, iterative Python prototype development, documentation, and analysis in a collaborative lab environment.
- Presented research progress, incorporated feedback, and documented findings for an academic research audience.

Undergraduate Research

January 2023 – May 2024

University of Arizona

- Worked closely with Professor Todd Proebsting on research in combinatorial optimization.
- Developed an interactive web tool to demonstrate theoretical concepts, strengthening experience with learner-facing technical design.

Undergraduate Teaching Assistant

August 2023 – April 2025

University of Arizona

- Held weekly office hours and supported students one-on-one with patience and clarity to help them achieve a greater understanding of course material.
- Developed rubrics to provide consistent, structured feedback on assignments.
- Coordinated with the teaching team to support course organization, grading workflows, and student communication.

SKILLS

- **Research:** Literature synthesis, technical writing, project organization, independent research, research documentation
- **Technical:** Python, C, Java, LaTeX, Git
- **Communication:** One-on-one support, structured feedback, collaborative research communication, bilingual English/Spanish communication
- **Languages:** English and Spanish (native proficiency), French (conversational proficiency)
